Standard Operating Procedure (SOP) – Admin & Operations Dashboard

1. Introduction & System Overview

Welcome to the Thebloomaa Admin Operations Dashboard! This system is designed to streamline your daily workflow, from verifying new orders to managing riders and tracking real-time deliveries.

The system uses a strict **2-Stage Workflow** to prevent errors and ensure riders only receive fully verified and paid orders:

- **Stage 1 (Operations & Dispatch Intelligence):** The global command center. All new orders land here first. Your primary task is to review payment proofs and **Approve** or **Reject** them.
- **Stage 2 (Order Management):** The daily dispatch board. Only **Approved** orders appear here. This page is used to monitor active deliveries for a specific date, assign riders, and confirm completed drops.

---

2. STAGE 1: Operations & Dispatch Intelligence

This is your main dashboard. It acts as the hub for all administrative tasks and contains four main tabs.

2.1. Live Order Dispatch & Verification

When a customer places a new order, it lands here with a `PENDING` subscription status.
Goal: Verify the payment and approve the order so it moves to dispatch.

Detailed Steps:

1. Navigate to the **Live Order Dispatch & Verification** tab.
2. Look for the yellow **"Pending Payment"** filter pill above the orders table. Click it to filter for all unverified orders.
3. In the "Admin Actions" column, click **View Receipt**. A modal will open showing the customer's payment details.
4. Verify the provided UTR number or the attached screenshot against your bank/UPI records.
5. **If payment is valid:**
    - Click the **Approve Payment** button.
    - The order is now marked as `Approved` and will automatically move to Stage 2 (Order Management) for dispatch. The subscription status becomes `ACTIVE`.
6. **If payment is invalid/missing:**
    - Click the **Reject Payment** button.
    - A text box will appear. Enter the exact reason for rejection (e.g., "UTR number incorrect", "Payment not received", or "Screenshot blurry").
    - Click confirm. The customer will be able to see this specific rejection reason in their dashboard.

2.2. Fleet & Riders Management

Use this tab to onboard new delivery personnel and manage existing ones.
Goal: Maintain an active fleet and assign them to specific operational zones.

Detailed Steps:

1. Navigate to the **Fleet & Riders** tab.
2. **Add a Rider:** Click **Add New Rider**. Enter their Name, Phone number (this is used for their rider app login), and Vehicle Type.
3. **Assign Zones:** Once a rider is added, click **Manage Zones** next to their name. Select the specific delivery zones (pincodes) they are responsible for covering.
4. **Active Toggle:** You can toggle a rider's **Active** status on or off. Inactive riders will be excluded from the auto-assignment system.

2.3. Customers & Subscriptions

Use this tab for customer support and subscription monitoring.
Goal: Manage customer requests, view dietary preferences, and track active subscriptions.

Detailed Steps:

1. Navigate to the **Customers & Subscriptions** tab.
2. Use the search bar to find a customer quickly by Name, Phone Number, or Email.
3. You can filter the customer list by **Diet Plan** using the dropdown menu.
4. In this view, you can see their active plans, total deliveries left, assigned allergies, and contact details.

2.4. Delivery Zones Management

Use this tab to define geographical boundaries for your deliveries.
Goal: Group pincodes into logical zones for the auto-assign system.

Detailed Steps:

1. Navigate to the **Delivery Zones** tab.
2. Click **Create New Zone**.
3. Name the zone descriptively (e.g., "Patna Central", "Boring Road").
4. Enter the active Pincodes for that zone, separated by commas.
5. Click Save. This setup is crucial for the "Auto-Assign Fleet" feature in Stage 2.

---

3. STAGE 2: Order Management

Once an order is **Approved** in Stage 1, it flows into the Order Management page. This page is strictly for **Daily Dispatch** operations.

3.1. Daily Dispatch & Kitchen Manifest

Goal: Organize the day's deliveries and export lists for the kitchen team.

Detailed Steps:

1. Navigate to the **Order Management** page.
2. Use the **Delivery Date Filter** at the top right to select either **Today**, **Tomorrow**, or choose a **Custom Date**. The table will only show approved orders scheduled for that specific date.
3. Click **Export Manifest** to download an Excel (.xlsx) sheet of the day's approved orders. Share this document with the kitchen team so they know exactly what to prepare and pack.

3.2. Rider Assignment

Goal: Assign riders to approved orders before dispatch.

Detailed Steps:

1. Ensure your Delivery Zones and Riders are set up correctly in Stage 1.
2. Click the **Auto-Assign Fleet** button. The system will automatically map unassigned orders to the correct riders based on matching pincodes/zones.
3. **Manual Override:** If you need to manually assign or change a rider, click the **Assign Rider** dropdown on an individual order row and select the appropriate rider from the list.

3.3. Double-Mark Verification (Delivery Completion)

To prevent false delivery marks by riders and ensure quality control, the system uses a double-verification method.
Goal: Confirm that a delivery was successfully completed.

Detailed Steps:

1. When a rider marks an order as delivered on their mobile app, the order status changes to `RIDER_DELIVERED`.
2. On your Order Management dashboard, these orders will be highlighted under the "Pending Double-Mark" counter.
3. Review the delivery (check for photo proof or customer confirmation if necessary).
4. Click **Verify Drop** next to the order. This officially marks the order as `DELIVERED` and deducts one day from the customer's subscription balance.

---

4. Troubleshooting & Status Glossary

Order Status Meanings

- `QUEUED` **(Unapproved):** Order placed, waiting for payment verification in Stage 1.
- `QUEUED` **(Approved):** Payment verified, ready for dispatch in Stage 2.
- `RIDER_DELIVERED`**:** Rider marked the drop as complete; waiting for admin double-verification.
- `DELIVERED`**:** Admin has double-verified the drop. Process complete.
- `FAILED`**:** Order was cancelled or payment was rejected.
- `SKIPPED`**:** Customer skipped this delivery date.

Subscription Status Meanings

- `PENDING`**:** Initial state, waiting for the first payment to be approved by admin.
- `ACTIVE`**:** Payment approved; deliveries are actively happening.
- `PAUSED`**:** Subscription paused by the customer.
- `FAILED`**:** Payment rejected or subscription fully cancelled.
